EXPERIENCE

Research and Development at University   2021-Present

- Throughout my university journey, I've spearheaded diverse projects, from frontend development to AI applications, showcasing my versatility and passion.

During my university period so far, I had the opportunity to carry out some projects such as:

- Syncal: Synchronized Calendar (ReactJS). Project more focused on the front-end where I had the opportunity to learn about requirements analysis, Cognitive Walkthrough, etc;
- ReadEaseManagement: Library Management System (ReactJS, SpringBoot, SQL, Docker). Complete project from Frontend to Backend implementation and Database integration.
- AI Digdug Agent (Python). Application of artificial intelligence techniques.
- Secure Online Store (ReactJS, NodeJS, SQL, Docker). Compact educational exercise focusing on identifying and mitigating web application vulnerabilities.
- Whisp (Django, Angular). Social media project to explore frameworks connections from Backend in Django Framework and Angular for Frontend.

All projects available on my [GitHub] profile.

Summer Job as cashier   Jun 2023- Sept 2023

- Exhibited active listening skills when resolving customer concerns and complaints, empathetically acknowledging their issues and offering appropriate solutions.
- Collaborated with team members to achieve store goals and uphold company standards for efficiency and customer satisfaction.
